EXPERIENCE

Senior Site Reliability Engineer (SRE), *Tekion*

11/2025 – Present | Bangalore

- Cloud-Native CI/CD Migration: Architected a scalable CI platform leveraging Tekton on Amazon EKS, eliminating legacy Jenkins upgrade bottlenecks and standardizing the migration of deployment pipelines to a cloud-native architecture.
- Infrastructure Automation & Blueprints: Developed standardized infrastructure and platform blueprints using Facets to enable automated scaling and rapid environment replication, significantly reducing infrastructure provisioning delays.
- Tech Stack: Tekton, Jenkins, AWS, Kubernetes

Software Development Engineer (SDE-2), *Flipkart*

01/2023 – 10/2025 | Bangalore

- Automated Upgrade Framework: Engineered a CI/CD-integrated pipeline for iterative OS and JDK upgrades, featuring automated log analysis and intelligent re-runs, boosting developer productivity by 30% through the elimination of manual migration tasks.
- Event-Driven RCA Engine: Architected an automated Root Cause Analysis (RCA) system using event-driven triggers to generate reports instantly upon incident detection, improving incident management efficiency by 15% and reducing manual developer intervention.
- Tech Stack: Kubernetes, GCP, Airflow, Python, SQL, Langgraph, Microservices architecture, SQL

Summer Analyst, *Goldman Sachs*

06/2022 – 08/2022 | Bangalore

- Liability Hedging Optimization: Modeled and simulated hedging strategies for unsecured liabilities to optimize the Weighted Average Cost of Debt (WACD), resulting in a measurable reduction in negative P&L and improved portfolio stability.
- Quantitative Debt Analysis: Executed deep-dive analytics on large-scale bond datasets exceeding 10,000 daily entries to identify WACD drivers, providing data-driven insights for strategic debt management.
- Tech Stack: Slang, C++, Excel

EDUCATION

M.Sc. Mathematics + B.E. Computer Science, *BITS Pilani*

08/2018 – 06/2023 | Pilani

(CGPA: 8.76/10.00)

PROJECTS

Integrated Manufacturing Resource Planning (MRP) & ERP System, *Freelancing*

08/2024 – 05/2025

- Architected a full-scale ERP platform to digitize a manufacturing lifecycle, including modules for Inventory Management, BOQ, and Work Order processing.
- Built a custom Analytics Dashboard to track production costs and sales trends, facilitating data-driven procurement and pricing strategies.
- Tech Stack: Streamlit (Python), GCP
